

# Editing/Formatting

## How do I Change the font/color/etc., of a clip?

You can't. The only clips that can be edited are TEXT clips. TEXT has only characters, spaces, tabs, etc. No fonts, sizes, colors, margins, pictures, etc.. There is an option to change the font that ClipMate uses to display the text. But that has no effect on the data. Pasted text usually assumes the font/color/etc., of the style present at the cursor location, when pasting into your word processor.
